HOSMER ON PUNAHOU

Report of the Outgoing President.

OAHU COLLEGE AFFAIRS

Fifty Thousand Dollars Needed for an Athletic Outfit—Other Recommendations.

The following is in part the annual report of President Hosmer of Oahu College to the trustees of the institution. Mr. Hosmer leaves to-day for a year's absence on the Mainland and in Europe.

In spite of the interruption caused by the visitation of the bubonic plague during the winter term, the college and preparatory school have enrolled this year the largest numbers in the history of each institution, there being one hundred and forty-five students at the college and three hundred in the preparatory school—a total of four hundred and forty-five.

The departments at the college have never been in better condition and the work of the faculty has been thorough and of a high order.

In my last annual report attention was called to the need of a gymnasium and a physical training department. In this connection let it be remarked that the importance of athletics should not be underrated. This branch holds a very considerable place in a complete education. The wise supervision of the physical development of American students of today is making a more stalwart race. The influence of athletics is not alone physical; it is also moral. It is the faded nervous system that seeks relief in excess. A healthy body is a favorable condition for sound morality.

Athletic sports sensibly conducted, reduce discipline, so-called, to a minimum. Youthful activities must have an outlet and for this reason out-door sports have been constantly encouraged by the administration during the last ten years. But more scientific effort should be put forth in this direction. The sum of fifty thousand dollars is needed for this department, twenty-five thousand dollars for a building with equipment and twenty-five thousand dollars for an endowment to pay the salary of the director.

During the past decade several new departments have been founded and the standard has been continually raised. Algebra, Latin and French have been added to the preparatory school curriculum and the requisites for admission to the college have been increased.

This curriculum should be supplemented by a College Course, comprising the studies of the freshman year preparatory to the degree of bachelor of arts in American universities. Indeed a large proportion of this work is already accomplished in Oahu College. Should this course of study be adopted graduating classes would be larger and the advanced work would be stimulated. An additional certificate or diploma might be given to those completing the college course offered.

In discussing the development of Punahou, local requirements must always be considered.

In addition to the need of physical training, already alluded to, the teaching of agricultural chemistry should grow into a strong agricultural department, when an increased endowment renders it possible.

The scientific department is at present overloaded. Besides classes in chemistry, the instructor is obliged to teach at different times during the year (as scheduled) physiology, physics, biology, physics, astronomy, botany, and geology. An assistant ought to be employed that the head of the department may devote his time to chemistry alone. Although we offer today an advanced course, including analysis of soils, polarization of sugar, etc., yet there is ample room for growth along this line because our local needs would seem to demand it.

In connection with the study of biology, a marine station—so often discussed—might be conducted. Perhaps no other place in the world affords better facilities for the study of marine life than these Islands. Should such a department be in time connected with our course of study, students would be attracted from all parts of the globe.

A brief course in trigonometry and surveying is now offered but it is hoped that an engineering department may sometime be established.

The business department is today deservedly popular because it is highly useful to the community. Here young men and young women are taught the elements of bookkeeping and commercial law and a thorough course is given in typewriting and shorthand. As this department is rapidly increasing in numbers, the time has come when more prominence must be given to it and another teacher be employed.

Aside from physical instruction, Punahou's greatest immediate need seems to be a course in manual training both in the college and at the preparatory school. It is not the teaching of some particular trade that is advocated but the effective control of the physical energy for certain results. The design should be instruction rather than production. The education of the mind, the development of the body, and the use of the hands should all be brought into one accord.

The pioneer work done at the college during the past few years in caring for the eyesight of the students, should be continued and it is hoped that in the new preparatory edifice the antiquated blackboard will be banished and, as in Pauahi Hall, there will be substituted dark shades of the same tints that prevail in the room. Olive green walls with dark olive dado and a pale pink sky, seem to present the most favorable conditions. Headaches are less frequent among students in such surroundings.
